XGB Series PLC - Basic System Setup

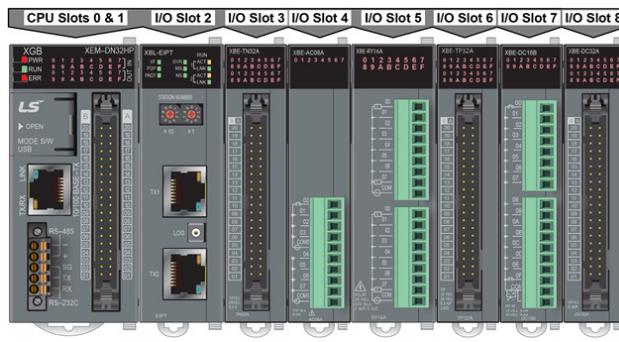

Follow the steps below to select and configure the fundamental components needed to get your XEM CPU module up and running. You can also access several quick start video guides here: [Building and Powering the LS PLC Rack](#)

- 1 Select your XEM CPU module, Smart Link cable, and Smart Link terminal block. The Smart Link cable and terminal block are only required if using on board I/O.
See "Smart Link I/O System" on page <?> for cable and terminal block part numbers.

- 2 Select and install up to seven option modules. 32-point I/O and counter input modules will require a Smart Link cable and terminal block. EtherCAT modules must be added to Slot 2 and 3 only.

Use the Product Selector to help configure the PLC at automationdirect.com/xgb/config.

- 3 Connect user-supplied 24VDC power. Connect power to the XEM module, then connect power to the XTB-40H terminal block and any installed I/O modules.

Note: XGB-CON-3PX cable pigtail is included with the CPU.

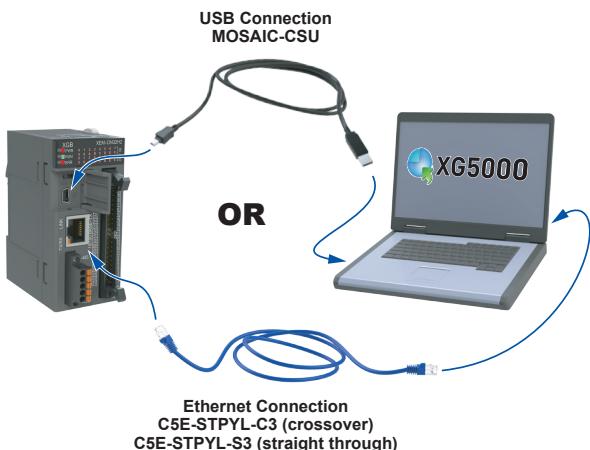

- 4 Choose programming cable, either a USB connection cable or Ethernet cable.

XGB Series PLC Family

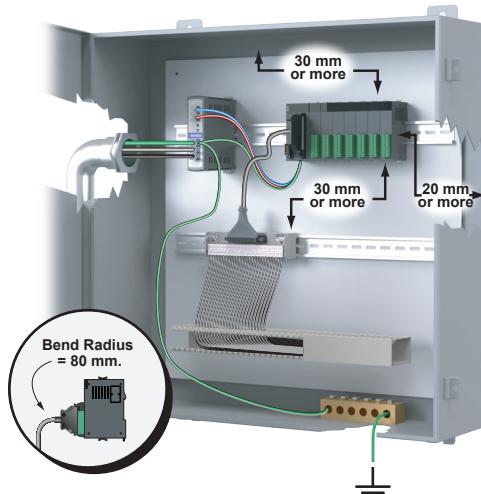

I/O Module Installation

Attach each I/O module to the PLC per the diagram to the right. Up to seven modules can be attached by hooking in to each expansion module in the same manner. Any 32-point I/O and counter input module will require a Smart Link cable and terminal block. Use the online Product Selector to help configure the PLC at automationdirect.com/xgb/config.

Mounting the PLC

When mounting the completed PLC module to your structure, keep the distances shown in the diagram below to maintain proper ventilation and allow easy detachment and attachment.

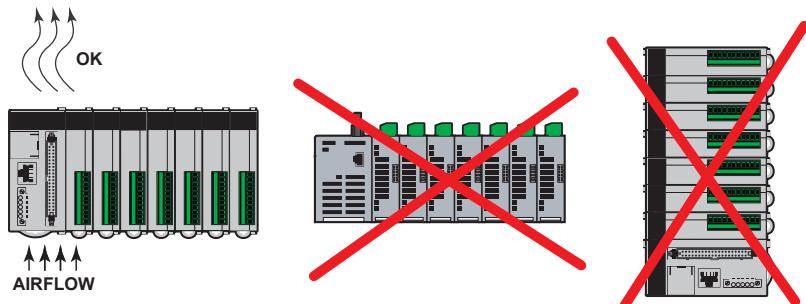

Additional Clearance Distances:

- Wire duct on the side requires 5mm or more
- Panel wall on the side requires 20mm or more
- Another device on the side requires 50mm or more

DIN Rail Mounting

The PLC has a hook for DIN rail mounting (35mm). To mount to DIN rail:

- Pull the hook as shown below at the bottom of module and install it at the DIN rail.
- Push the hook to fix the module to the rail after installing.

XBF-AD04A Analog Input Module Wiring

When connecting cable to your XBF-AD04A:

- In case of voltage/current input, wiring is the same. Adjust the voltage/current setting switch according to the case.
- Keep the AC power line away from the analog input module's external input signal line to prevent surge or inductive noise.
- Use cable rated to meet your application's ambient temperature and current needs. AWG22 (0.3mm²) or greater recommended.
- Keep cable clear of high heat and oil.
- Check polarity when wiring the terminal.
- Using high-voltage line or power line may cause abnormal operations or defects due to inductive hindrance.
- Make sure the desired channel is enabled.

Notes:

- Use 2-core twisted shield cable
- Use AWG22 (0.3mm²) or greater cable
- Current input resistance is 250Ω
- Voltage input resistance is 1MΩ
- Terminal screwdriver: slotted 2.5 mm

Direct Variables

All XGB series analog modules are assigned 32 words in the "U" memory area based on the slot number assignment. (%UW0.z.0 - %UW0.z.31 , z= slot number). The actual memory address used within the 32 word block are specific to each module. See the table below for Direct Variable assignments.

For Direct Variable nomenclature explanation, see [Direct Variable User Programming Memory](#).

Symbolic Variables

Symbolic variables for the analog module can be automatically created in XG5000 software by using the top MENU bar: Edit > Register Module Variable Comments.

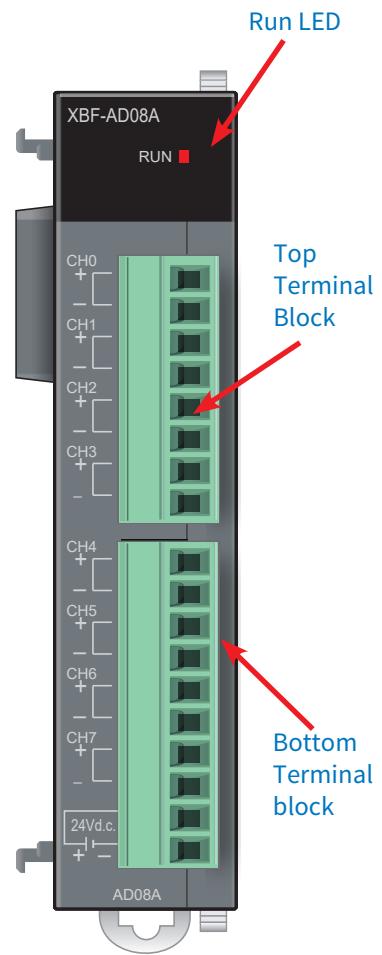

Symbolic variables and direct variables for AD04A are as follows (z refers to module slot number (2 to 8)).

XBF-AD08A Analog Input Module Wiring

When connecting cable to your XBF-AD08A:

- In case of voltage/current input, wiring is the same. Adjust the voltage/current setting switch according to the case.
- Keep the AC power line away from the analog input module's external input signal line to prevent surge or inductive noise.
- Use cable rated to meet your application's ambient temperature and current needs. AWG22 (0.3mm²) or greater recommended.
- Keep cable clear of high heat and oil.
- Check polarity when wiring the terminal.
- Using high-voltage line or power line may cause abnormal operations or defects due to inductive hindrance.
- Make sure the desired channel is enabled.

Notes:

- Use 2-core twisted shield cable
- Use AWG22 (0.3mm²) or greater cable
- Current input resistance is 250Ω
- Voltage input resistance is 1MΩ
- Terminal screwdriver: slotted 2.5 mm

- Keep cable clear of high heat and oil.
- Check polarity when wiring the terminal.
- Using high-voltage line or power line may cause abnormal operations or defects due to inductive hindrance.
- Make sure the desired channel is enabled.

Notes:

- Use 2-core twisted shield cable
- Use AWG22 (0.3mm²) or greater cable
- Load resistance is 510Ω or less
- Terminal screwdriver: slotted 2.5 mm

For 12V encoders, use a 1k Ohm dropping resistor between each encoder signal (Out A, Out B, Out Z) and the corresponding 5V terminal above.
 For 24V encoder signals, wire each encoder signal (Out A, Out B, Out Z) to the A 24V, B 24V, and Z 24V inputs. No dropping resistor required.

XG5000 and XG-PM Software for XGB Series PLC

XG5000 and XG-PM are the powerful software combination used to program and configure the LS Electric XGB Series PLC. Both packages are installed with a single executable file for XG5000.

XG5000

Offers four languages from the IEC61131-3-3 PLC programming standard.

- Ladder Diagram (LD): includes over 700 advanced function blocks for use, with over 80 motion and position functions.
- Structured Text (ST): a text based language which is a powerful tool for advanced motion programming and data handling.
- Sequential Function Chart (SFC) and Instruction List (IL) are also supported.

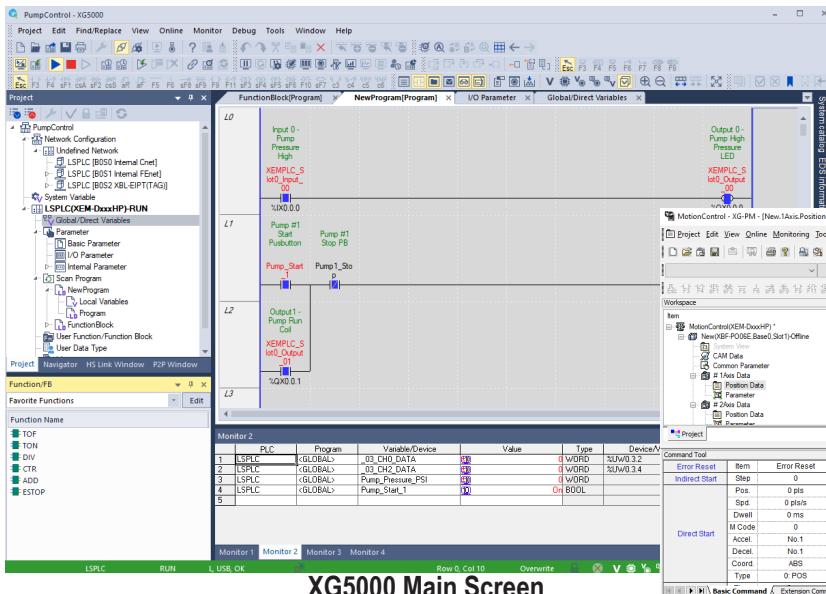

The software uses Symbolic (also called Automatic) variables created by the user. These can be created as global or local task variables, and can be aliased to direct variables. Variables can be imported/exported for quick editing in spreadsheet format.

Other features include User data types/function blocks, XY Trend for motion visualization, online system information, simulator, EDS file library for EtherNet/IP communications, and much more.

XG-PM

XG-PM Position control software is used to configure the pulse-based or EtherCAT-based motion features in the XGB series PLC.

Configuration of up to 400 motion positions per axis via table entry makes setting up complex motion applications simple. The Command Tool allows for quick testing, and online edits per axis make maintenance changes quick and easy. Access XG-PM from the XG5000 Main menu-> Tools ->Position Control.
