

# Digital Counter/Timer/Tachometer CTT Series

AUTOMATIONDIRECT

3505 HUTCHINSON ROAD  
CUMMING, GA 30040-5860

## Quick Start Guide

### Description:

The CTT series is an extremely versatile multi-function device that is easily configured for operation as a digital counter, timer, combination timer + counter, or tachometer. Both voltage and non-voltage inputs are accepted from a wide variety of sensor types with NPN, PNP, or dry contact outputs. The first output on the CTT is a single-pole, single-throw relay and NPN transistor that operate concurrently. The second CTT output can be ordered as either a single-pole, double throw relay or NPN transistor. Parameters are easily set using the externally accessible DIP switches or the lockable keypad. The double-line, 6-digit, two-color LCD display shows the counter, timer, or tachometer present values, setting values and menu parameters during set-up. Additional individual indicators are provided for inputs, outputs and functions. The standard 1/16 DIN size, included panel mounting clip and gasket make panel mounting a snap. The CTT is available in 120-240VAC and 24VDC powered models.

Counter Functions	Counter Input Modes	Counter Output Modes
1-Stage	Up	Select from eleven (11) different output modes (F, N, C, R, K, P, Q, A, S, T, D)
2-Stage	Down	
Batch	Up / Command Down	
Total	Up/Down	
Dual	Quadrature	
	Addition	
	Subtraction	

Timer Functions (Up or Down)
Signal On Delay 1 Repeat Cycle
Signal On Delay 2 Repeat Cycle Hold
Signal Off Delay Repeat Cycle 2
Signal On Signal Cumulate
Power On Delay Signal Twin On-Start
Power On Delay Hold Signal Twin Off-Start

Timer Functions (Up or Down)	Counter Input Modes	Counter Output Modes
Signal On Delay 1	Up	Select from eight (8) different output modes (F, N, C, R, K, P, Q, A)
Signal On Delay 2	Down	
Signal Off Delay		
Signal On		
Power On Delay		
Power On Delay Hold		
Repeat Cycle		
Repeat Cycle Hold		

Tachometer Output Modes
Select from four (4) different output modes
2Lo/1Lo
2Lo/1Hi
2Hi/1Lo
2Hi/1Hi

For additional product information, please download the complete product manual which can be found at:  
[www.AutomationDirect.com](http://www.AutomationDirect.com)

### Box Contents and Unpacking Instructions

After receiving the CTT Counter/Timer/Tach, please check for the following:

- Make sure that the package includes the CTT Counter/Timer/Tachometer, the mounting bracket and hardware, and the Quick Start Guide.
- Inspect the unit to insure it was not damaged during shipment.
- Make sure that the part number indicated on the label corresponds with the part number of your order.
- If anything is missing or damaged, immediately call the AutomationDirect returns department @ 1-800-633-0405.
- For additional product information, please download the complete product manual which can be found at: [www.AutomationDirect.com](http://www.AutomationDirect.com)

## WARNING

Thank you for purchasing automation equipment from AutomationDirect.com™, doing business as AutomationDirect. We want your new automation equipment to operate safely. Anyone who installs or uses this equipment should read this publication (and any other relevant publications) before installing or operating the equipment.

To minimize the risk of potential safety problems, you should follow all applicable local and national codes that regulate the installation and operation of your equipment. These codes vary from area to area and usually change with time. It is your responsibility to determine which codes should be followed, and to verify that the equipment, installation, and operation is in compliance with the latest revision of these codes.

At a minimum, you should follow all applicable sections of the National Fire Code, National Electrical Code, and the codes of the National Electrical Manufacturer's Association (NEMA). There may be local regulatory or government offices that can also help determine which codes and standards are necessary for safe installation and operation.

Equipment damage or serious injury to personnel can result from the failure to follow all applicable codes and standards. We do not guarantee the products described in this publication are suitable for your particular application, nor do we assume any responsibility for your product design, installation, or operation.

Our products are not fault-tolerant and are not designed, manufactured or intended for use or resale as on-line control equipment in hazardous environments requiring fail-safe performance, such as in the operation of nuclear facilities, aircraft navigation or communication systems, air traffic control, direct life support machines, or weapons systems, in which the failure of the product could lead directly to death, personal injury, or severe physical or environmental damage ("High Risk Activities"). AutomationDirect specifically disclaims any expressed or implied warranty of fitness for High Risk Activities.

For additional warranty and safety information, see the Terms and Conditions section of our catalog. If you have any questions concerning the installation or operation of this equipment, or if you need additional information, please call us at 770-844-4200.

This publication is based on information that was available at the time it was printed. At AutomationDirect we constantly strive to improve our products and services, so we reserve the right to make changes to the products and/or publications at any time without notice and without any obligation. This publication may also discuss features that may not be available in certain revisions of the product.

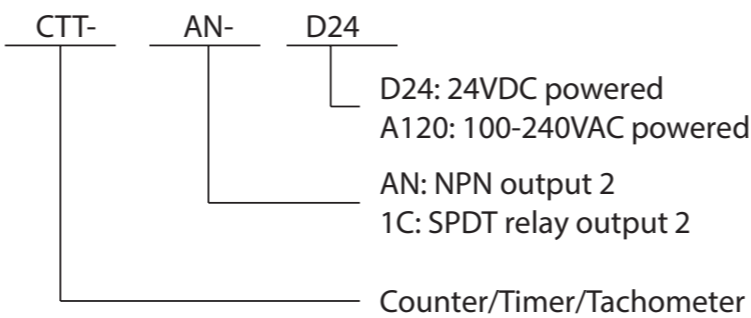

## Trademarks

This publication may contain references to products produced and/or offered by other companies. The product and company names may be trademarked and are the sole property of their respective owners. AutomationDirect disclaims any proprietary interest in the marks and names of others.

Copyright 2011-2012, AutomationDirect.com™ Incorporated

No part of this manual shall be copied, reproduced, or transmitted in any way without the prior, written consent of AutomationDirect.com™ Incorporated. AutomationDirect retains the exclusive rights to all information included in this document.

### Model Number Explanation

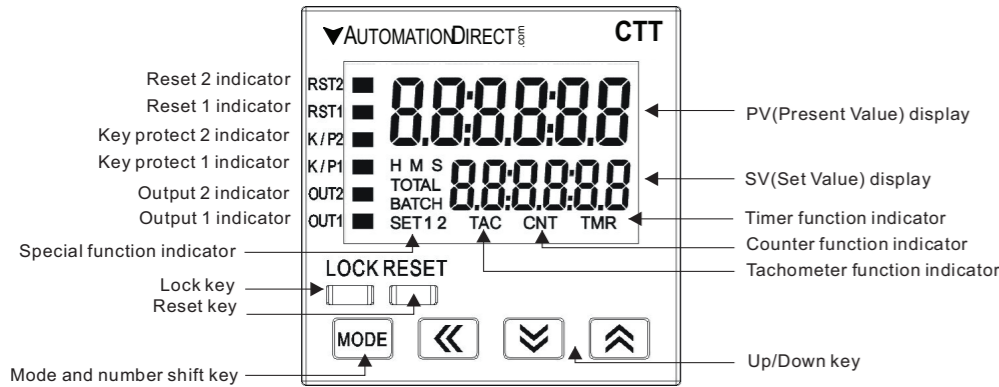

### Label Information

### Dimensions [mm] inch

### Display, Indicators and Keys

LCD Display and Indicators		
RST 1/2	Light on when reset signal is detected	BATCH "Batch Counting Mode" in Counter
K/P 1/2	Light on when key-protected mode is enabled	SET 1 2 SV1, SV2 display
OUT 1/2	Light on when output is executing	TAC Light on in Tachometer function
H M S	Hour, minute, second, unit of timer, displayed in Timer function	CNT Light on in Counter function
TOTAL	"Total Counting Mode" in Counter function	TMR Light on in Timer function

Key Operation	
▲ ▼	Increase and decrease SV or change parameter settings
◀	Left move 1 digit of the selected digit. The indicator of the selected digit will flash.
MODE	Save the set parameters or switch among functions.
LOCK	Prevent settings from being changed. Key-protected mode still works after power cycle. In non-key-protected status, press LOCK to enter Lock 1, press LOCK again to enter Lock 2. Press MODE and ▲ at the same time to disable key-protected mode. Lock 1 (Lock 1) disables the functions of all keys. Lock 2 (Lock 2) allows users to change SV and functions of RESET remain. LOCK only functions in non-key-protected status.
RESET	Clear and reset PV.

Modes: Operation Mode and Configuration Mode	
Operation	When the power is on, the timer/counter/tachometer is in the operation mode. Press ▲ ▼ to change SV, or ▲ to select to change digit. The indicator of the selected digit will flash. After the change is made, press MODE to save the setting. If SV or parameters are not changed, press MODE once to switch between SET1 and SET2.
Configuration	Press MODE in operation mode for more than 3 seconds to enter configuration mode. Press MODE once to switch among parameters. To return to operation mode, press MODE for more than 3 seconds.

### General Specifications

Digital Counter / Timer / Tachometer General Specifications		
Input Power Requirements	100 to 240 VAC 50/60 Hz	24 VDC
Operation Voltage Range	85 to 264 VAC	21.6 to 26.4 VDC
Power Consumption	Less than 10VA	
Power Source	12VDC ± 10%, 100mA	
Display	Double-line, 6-digit LCD display (SV = 8mm, PV = 6mm)	
Input Signal	NPN ON impedance 1K ohm max. ON residual voltage: 2V max. PNP 4.5 to 30VDC, low level: 0 to 2VDC	
Output 1	Relay: SPST max. 250VAC, 5A (resistive load), 4A (inductive load); Transistor: NPN open collector. When 100mA @ 30VDC, residual voltage = 1.5VDC max	
Output 2	CTT-1C-xxx	Relay: SPDT max. 250VAC/30VDC, 5A (resistive load), 4A (inductive load)
	CTT-AN-xxx	Transistor: NPN open collector. When 100mA @ 30VDC, residual voltage = 1.5VDC max
Output Switching Time	2 milliseconds max	
Dielectric Strength	2000VAC 50/60Hz for 1 minute	
Vibration Resistance	Without damage: 10 ~ 55Hz, amplitude = 0.75mm, 3 axes for 2 hours	
Shock Resistance	Without damage: drop 4 times, 300m/s <sup>2</sup> 3 edges, 6 surfaces and 1 corner	
Ambient Temperature	+32°F to +122°F (0°C to +50°C)	
Storage Temperature	-4°F to +149°F (-20°C to +65°C)	
Altitude	2000m or less	
IP Rating	IP 66 (with proper enclosure installation)	
Case Materials	Case = ABS Plastic, Lens = Polycarbonate	
Ambient Humidity	35% to 85% RH (non-condensing)	
Memory Backup upon Power Failure	EEPROM writing up to 100,000 times; Memory duration: 10 years	
Terminals	Conforming Wiring	0.25-1.65mm <sup>2</sup> (24 to 16 AWG)
	Permitted Torque	0.5Nm (0.369 ft/lbs)
Agency Approvals	UL508 listed (E311366), cULus, CE marked	

### Terminal Layout

#### CTT-1C-D24

#### CTT-AN-D24

#### CTT-1C-A120

#### CTT-AN-A120

## Counter Example:

### 1-Stage Counting (S186E)

#### Counting Up (UP)

Using the counter feature of the CTT to count the total number of pieces in a box to signal a conveyor to advance to the next station.

#### Input Mode

##### Counting Up (UP)

With the input signal OFF at input CP2, each leading edge of the input signal at CP1 will increment the count present value PV by 1.

#### Output Mode

##### Mode F (F)

When the count present value PV counts up to the count setting value SV both outputs 1 and 2 will turn ON.

The count PV will continue to increment with each input signal. The leading edge of a "reset" input signal at RST1 will turn OFF both outputs, reset the count PV to 0, and prohibit an input signal from incrementing the count PV. The trailing edge of the "reset" signal at RST1 enables counting to begin.

## Keypad set up of the parameters in the Counter for 1-Stage Counting:

To enter the page for parameter setting of the counter, press **MODE** for the main menu for more than 3 seconds. After the setup is completed, press **MODE** for more than 3 seconds under any of the parameter page you are in and return to the main menu.

Select functions: There are 4 modes in CTA, (left to right) timer, counter, tachometer and timer + counter.

Func FUnC | tCnT | CoNt | tARCh | nCY

MODE Select counter functions: 1-stage counting, 2-stage counting, batch counting, total counting, dual counting.

CnT FUnC | S186E | S186E2 | bARtCh | toTAL | dUAL

MODE Select input modes: counting up, counting down, command counting up/down, individual counting up/down, quadrature input.

CnPt | UP | dOwN | Ud\_A | Ud\_b | Ud\_C

MODE Select output modes: CTA offer 11 output modes, among which mode S, T and D are only valid with input modes Ud\_A, Ud\_b and Ud\_C.

CnTnd | S | T | D | P | F | R | C | L | H | P

MODE | 9 | 9 | 9 | 9 | 9 | 9 | 9 | 9

Select counting speed: Maximum 10Kcps; others 5K, 1K, 200, 30 and 1cps.

C SPeD | 10K | 5K | 1K | 200 | 30 | 1

MODE Pulse width of output 1: The default output time is 0.02 second. When the parameter is set to 0.00 second, the output status will continue.

t ouT 1 | 0.02 | 0.00

MODE Pulse width of output 2: This parameter is adjustable according to different output modes selected. If the output mode is C, the default output time will be 0.02 second. When the parameter is set to 0.00 second, the output status will continue.

t ouT 2 | 0.02 | 0.00

MODE Set up the position of decimal point: 0 (no decimal point), 1 (one digit after decimal point), 2 (two digits after decimal point), 3 (three digits after decimal point).

PoNt | 0 | 1 | 2 | 3

MODE Set up pre-scale value: 1.000 (default 1:1) Range: 0.001 to 99.999

PSCALE | 1000

MODE Save the data while switching off the power: When SAVE is selected, the PV will be saved; when CLEAR is selected, the PV will not be saved.

PVErS | CLEAR | SAVE

MODE Set up minimum width of reset signal: Default = 20ms; 1ms is also selectable

rESr | 20 | 1

MODE Select input signal types: NPN and PNP

CnPLLC | nPN | PnP

MODE

Back to Top

## Timer Example:

A basic Timer used to control a clamp time of a compression model press. When the operator signals the mold is loaded with material by pressing the start button the hydraulic cylinder closes the press to make a limit switch which starts the CTT timing. Upon completion of the timer cycle Output 1 is turned on and the press is opened by the hydraulic cylinder.

#### Signal On Delay 1 (Sond1)

With power applied to the CTT, the leading edge of an input signal at START will begin the timing period setting value SV (timing up or down based on parameter **tmode**). At the end of the timing period both outputs will turn ON momentarily for the time set in the output pulse width parameter (**ouT**) or will be maintained ON if the output pulse width parameter (**ouT**) is set to 0.00. The trailing edge of the "start" signal has no effect on the outputs or timing period. The leading edge of a "reset" input signal at RST1 will turn OFF the outputs and reset the timing period.

The "reset" signal minimum pulse width is set by reset pulse width parameter (**rESr**) or DIP Switch 8. The leading edge of a "pause" signal at GATE will pause the timing period after it has been started. The timing period will continue after the trailing edge of the external switch "pause" (Gate) signal. When power is removed, both outputs will turn OFF and the timing period will be reset.

## Keypad set up of the parameters in the Timer:

To enter the page for parameter setting of the timer, press **MODE** in the main menu for more than 3 seconds. After the setup is complete, press **MODE** for more than 3 seconds under any of the parameter page you are in and return to the main menu.

Select functions: There are 4 modes in CTT, (left to right) timer, counter, tachometer and timer + counter.

Func FUnC | tCnT | CoNt | tARCh | nCY

MODE Select timer mode: timing up and timing down

tmode | UP | dOwN

MODE Select output modes: There are 12 output modes in the timer. The user can choose the mode that best meets the demand.

CnTnd | Sond1 | Sond2 | SoFFd | Son | Pond | PondH

MODE | rCY | rCYH | rCY2 | SCon | Ston | StOFF

Select display unit: the min. unit 10ms to the max. unit hour are selectable. Refer to table below.

t UnCL | S 00.1 | S 0.1 | S | nS 00.1 | nS 0.1 | n 0.1

MODE | m | HrS | Hn | H |

MODE Select pulse width of output 1: The default output time is 0.02 second. When the parameter is set to 0.00 second, the output status will continue.

t ouT 1 | 0.02 | 0.00

MODE

MODE Select min. width of reset signal: The default value is 20ms; can be set to 1ms.

rESr | 20 | 1

MODE Select input signal types: NPN and PNP

CnPLLC | nPN | PnP

MODE

Back to Top

## Tachometer Example:

Using PSCALE to convert pulses into engineering units

The PSCALE feature of the CTT is very useful in converting the pulsed signal from an encoder or sensor into some usable unit of measurement.

For example if one was to connect a proximity switch to the CTT to monitor the speed of a motor using a sensing gear there is a simple calculation to convert the pulses from the sensor to Motor RPMs.

Using this formula you can calculate a PSCALE value to change a pulse signal into RPMs. First obtain the pulses per revolution (ppr) or number of teeth on the sensing gear for example in the illustration below there are 38 teeth on the gear or 38 ppr. If the gear is coupled directly to the motor this is all that is required to perform the calculation.

$PSCALE = 60/ppr$  or  $60/38$

$PSCALE = 1.579$

With the PSCALE set to 1.579 for every 38 input cycles the CTT will display a value of 1.

## Keypad set up of the parameters in the Tachometer:

Select functions: There are 4 modes in CTT, (left to right) timer, counter, tachometer and timer + counter.

Func FUnC | tCnT | CoNt | tARCh | nCY

MODE Select output modes: There are 4 output modes, 2Lo1Lo, 2Lo1Hi, 2Hi1Lo, and 2Hi1Hi. For example, when you select 2Hi1Lo, and assume the first set value is 100 (2Hi) and the second 50 (1Lo), the output value of the tachometer will be below 100 (2Hi) and above 50 (1Lo) and CTT will not perform an output. If the set value exceeds the range, CTT will perform an output.

CnTnd | 2Lo1Lo | 2Lo1Hi | 2Hi1Lo | 2Hi1Hi

MODE Select rotation speed: Maximum 10Kcps; others 5K, 1K, 200, 30 and 1cps.

C SPeD | 10K | 5K | 1K | 200 | 30 | 1

MODE Set up the position of decimal point: 0 (no decimal point), 1 (one digit after decimal point), 2 (two digits after decimal point), 3 (three digits after decimal point).

PoNt | 0 | 1 | 2 | 3

MODE Set up pre-scale value: 1.000 (default 1:1) Range: 0.001 to 99.999

PSCALE | 1000

MODE Set up the delay time after switching on the power: 0.0 (default). The tachometer will start to run when the set delay time is due after the power is switched on. Setup range: 0.1 to 99.9 seconds

St tAR | 00

MODE Set up average value of the input filter: The average value is for making the present value detected by the tachometer more stable. The setup range is 0 to 3 (1 = 2 data, 2 = 4 data, 3 = 8 data). For example, if you select "3", the system will average the 8 present values from the tachometer to make the present value displayed on the screen more stable.

St AVE | 0 | 1 | 2 | 3

MODE Set up minimum width of reset signal: Default = 20ms; 1ms is also selectable.

rESr | 20 | 1

MODE Select input signal types: NPN and PNP.

CnPLLC | nPN | PnP

MODE
