BX ME Micro PLC Unit (MPU) Overview

The BX ME Micro PLC Unit (MPUs) includes two different versions. Both have the same appearance and basic features, the only difference being that one unit is externally powered with 12–24 VDC and the other unit is externally powered with 120–240 VAC.

The units have no built-in I/O points. This allows use as a standalone controller unit with no I/O or you can customize the I/O to meet the needs of your application by adding BRX Expansion Modules. All BX ME MPUs can expand their capacity with the addition of as many as eight (8) BRX Expansion Modules, allowing more flexibility while keeping control cost down.
